
PLAYWRIGHT IMPORTANT QUESTIONS

1. Testing Basics

What is software testing?
Why is testing required?
Manual Testing vs Automation Testing.
What is Regression Testing?
What is Functional Testing?
What is Non-functional Testing?
What are the advantages of automation testing?
Why can't we automate everything?
When should automation not be used?
Which testing types are best suited for automation?

2. Playwright Basics

What is Playwright?
Who developed Playwright?
Why is Playwright becoming popular?
What browsers does Playwright support?
Why is Playwright faster than Selenium?
Explain Playwright Architecture.
Explain Client Layer, Server Layer and Browser Layer.
Why does Playwright use WebSocket?
Why are commands converted into JSON?
What is CDP?
Why are Firefox and WebKit patched versions used?

3. JavaScript + Playwright

Why is JavaScript commonly used with Playwright?
What is async?
What is await?
Why is await important?
Difference between synchronous and asynchronous execution.
What happens if await is not used?
What is Promise?
Difference between var, let and const.

4. Playwright Project Structure

Explain the Playwright folder structure.
What is node_modules?
What is package.json?
What is package-lock.json?
What is playwright.config.js?
What is playwright-report?
What are test-results?
Why is package-lock.json important?

5. Fixtures

What is a Fixture?
Why do we use Fixtures?

What are built-in fixtures?
Explain browser fixture.
Explain context fixture.
Explain page fixture.
Explain browserName fixture.
Explain request fixture.

6. Browser, Context & Page

Difference between Browser, BrowserContext and Page.
What is BrowserContext?
Why do we use BrowserContext?
Can one browser have multiple contexts?
Difference between Context and Page.
Can multiple pages share cookies?
Can multiple contexts share cookies?
What happens when browser.close() is called?

7. Browser Controls

What is browser control?
Explain chromium.launch().
Difference between headed and headless mode.
What happens if headless:false?
What does page.goto() do?
What is page.url()?
What is page.title()?
What is viewport?
Why do we use setViewportSize()?
Different ways to capture screenshots.
How do you avoid screenshot overwrite?
How do you capture screenshots only on failure?

8. Locators & Selectors

What is a Locator?
Difference between Locator and Selector.
Why are Locators preferred in Playwright?
Explain auto-waiting in Locators.
Explain retry mechanism.

9. CSS Selectors

What is CSS Selector?
ID Selector.
Class Selector.
Tag Selector.
Attribute Selector.
Why combine tag and attribute?
Which selector is fastest?

10. XPath

What is XPath?
Difference between CSS and XPath.
Absolute XPath vs Relative XPath.
Why avoid Absolute XPath?
XPath by Attribute.

XPath by Text.
XPath by contains().
XPath by starts-with().
Difference between text() and ".".
Difference between contains() and starts-with().
Difference between AND and OR.
Explain last().
Explain position().

11. XPath Traversing

What is Traversing?
Explain parent::.
Explain child::.
Explain ancestor::.
Explain descendant::.
Explain following-sibling::.
Explain preceding-sibling::.
Difference between / and //.
Difference between .. and parent::.

12. getBy Methods

What are getBy methods?
getByRole()
getByText()
getByLabel()
getByPlaceholder()
getByAltText()
getByTitle()
getByTestId()
When should you prefer getByRole over CSS?

13. Action Methods

click()
dblclick()
fill()
type()
press()
check()
uncheck()
hover()
dragAndDrop()
selectOption()
setInputFiles()
clear()

14. Validation (Assertions)

What is Assertion?
Why do we use expect()?
Difference between Hard and Soft assertions.
toHaveText()
toContainText()
toBeVisible()
toBeHidden()

toBeEnabled()
toBeDisabled()
toHaveValue()
toHaveURL()
toHaveTitle()

15. Waits

Explain Auto Wait.

waitForTimeout().

waitForSelector().

waitForLoadState().

waitForURL().

Which wait should be avoided and why?

16. Mouse Actions

Hover.

Right Click.

Double Click.

Drag and Drop.

Mouse Move.

17. Keyboard Actions

press().

pressSequentially().

Keyboard shortcuts.

Difference between fill() and type().

18. Alerts

Types of Alerts.

How do you handle alerts?

accept()

dismiss()

19. Frames

What is an iframe?

Difference between Frame and FrameLocator.

Difference between frame and frames

How do you switch to iframe?

Nested Frames.

20. Multiple Windows

How do you handle multiple tabs?

page.waitForEvent('popup')

21. File Upload & Download

How do you upload files?

setInputFiles().

How do you download files?

download.saveAs().

22. Browser Permissions

How do you handle notifications?

How do you allow camera permissions?

Geolocation permissions.

Clipboard permissions.

23. Hooks

What are Hooks?

beforeAll().

beforeEach().

afterEach().

afterAll().

Real-time use of Hooks.

24. Data Driven Testing (DDT)

What is DDT?

Why use Excel?

Why install exceljs?

JSON vs Excel.

How do you read Excel?

Why convert values to String()?

Advantages of DDT.

25. Page Object Model (POM)

What is POM?

Advantages of POM.

What should be stored inside a Page Object?

Should locators be stored?

Should business methods be stored?

Should expect() be written inside POM?

Difference between POM and Utilities.

Explain constructor(page).

Why use this.page?

How do you call POM methods from spec files?

26. Framework Questions

What is an Automation Framework?

Types of Frameworks.

Why Hybrid Framework?

Explain your framework architecture.

Explain folder structure.

Where do you keep:

Page Objects

Test Data

Utilities

Hooks

Config

Reports

Screenshots

Downloads

Test Files

Why separate utilities?

Explain reusable functions.

How do you organize large projects?

27. Reporting

HTML Report.

Trace Viewer.

Screenshot on Failure.

Video Recording.

Playwright Report.

28. TestAnnotation

What are test annotations in Playwright?

Why do we use test annotations?

What are the different test annotations available in Playwright?

Can we use multiple annotations on the same test?

What is `test.only()`?

Why is `test.only()` used?

What is `test.fixme()`?

Difference between `test.skip()` and `test.fixme()`.

When should you use `fixme()` instead of `skip()`?

What is `test.fail()`?

Why do we use `test.fail()`?

What happens if a `test.fail()` test unexpectedly passes?

Why do we use `test.slow()`?

What happens to the timeout when `test.slow()` is used?

Why do we group tests using `test.describe()`?

28. Scenario-Based Questions (Very Important)

Login fails only in Firefox. How will you debug?

Element is visible but click fails.

Dynamic IDs change every execution.

Multiple matching locators are found.

Application opens a new tab after clicking.

Need to upload multiple files.

Need to download a file and verify its name.

OTP page appears during login.

Need to test two users chatting simultaneously.

Need to reuse login across 100 tests.

UI changes frequently—how will you design your framework?

How would you reduce test execution time?

When would you choose CSS selectors over XPath, and vice versa?

How would you make your framework scalable for hundreds of test cases?
